The Assisting Hand Assessment (AHA)

5 – 7 March 2018

Burfoot Court

Guy's Hospital, London

The AHA course teaches the Assisting Hand Assessment, the new version 5.0 and is conducted in two steps. First, a 2½-day training course include information about the test construct, testing procedure and scoring practice on a range of children from videos. A manual with detailed scoring criteria and a computer based scoring form is provided. Secondly, and to achieve certification, participants are required to complete six additional cases and get satisfactory results. Some of these can be from videos provided on a web based e-learning platform, and some can be from self-produced AHA play sessions. Individual feedback of these cases is provided.

Upon completion of this course, participants will be able to:

- *Demonstrate the set up, conduct and video record an Assisting Hand Assessment session and produce reliable scores according to the criteria in the manual*
 - *Verbalise the concept and construct of the test and its psychometric properties*
 - *Interpret and communicate the outcome of the test*
