The Hand Assessment for Infants (HAI)

8 – 9 March 2018

Burfoot Court

Guy's Hospital, London

This course teaches the reliable use of the HAI, in two steps. The first step involves a two-day workshop where participants will learn about the constructs underlying the HAI, test procedures, test objects used, and scoring of infants from video recordings. A HAI manual with detailed scoring criteria and a computer based scoring form will be provided. The second step, following the course, participants will be expected to create their own test kit according to instructions given during the course.

Upon completion of this course, participants will be able to:

- *Demonstrate how to select appropriate toys for a HAI play session*
- *Demonstrate the set-up and video-recording of the session and how toys are used to provoke active hand use in infants*
 - *Produce reliable scores according to the criteria in the manual*
- *Understand the constructs upon which the HAI is based and describe early psychometric evidence*
